

A very brief introduction to \LaTeX and beamer

Doug Drinen

Summer 2010

Typesetting Equations

This is some text with some math right in the middle of a regular paragraph: $\int_0^\pi x^2 dx = \pi^3/3$. Look at that! This is said to be an *inline* equation.

More on inline equations

If you don't use math mode, people will laugh at you:

RIGHT: Let m and n be integers with $m = n$.

WRONG: Let m and n be integers with $m = n$.

Still more on inline equations

There are a few special cases, though. Note that the name of the sine function looks silly in math mode.

RIGHT: $\sin(x)$.

WRONG: $\sin(x)$.

The same is true of natural log (use \ln), cosine (\cos), and a few others.

Displayed Equations

If an equation is important, you can put it in *display* mode instead of inline mode. This gives it a little more prominence. Here, for example, is an important fact.

$$\frac{x}{y} + \frac{w}{z} = \frac{xz + wy}{yz}.$$

Watch out for plain text in displayed equations!

This is pretty ugly:

$$\textit{For all } \theta, \theta + 2\theta = 3\theta.$$

What to do about it

Do this:

$$\text{For all } \theta, \theta + 2\theta = 3\theta.$$

Or maybe even this:

$$\text{For all } \theta, \theta + 2\theta = 3\theta.$$

Lots and lots of symbols are available in \LaTeX

$$\ln \left(\prod_{\xi=1}^{\nu} \vartheta_{\xi} \right) = \sum_{\iota=1}^{\sqrt{\nu^2}} \ln(\vartheta_{\iota}).$$

A bulleted list

- ▶ $1^1 + 6^1 = 7^1$
- ▶ $3^2 + 4^2 = 5^2$
- ▶ Are there nonzero integers a , b , and c such that $a^3 + b^3 = c^3$?

A numbered list

1. $1^1 + 6^1 = 7^1$
2. $3^2 + 4^2 = 5^2$
3. Are there nonzero integers a , b , and c such that $a^3 + b^3 = c^3$?

A numbered list with customized “numbers”

One $1^1 + 6^1 = 7^1$

B $3^2 + 4^2 = 5^2$

Third Are there nonzero integers a , b , and c such that
 $a^3 + b^3 = c^3$?

An aligned equation

$$\begin{aligned}(x + y)(x - y) &= x^2 + xy - xy - y^2 \\ &= x^2 - y^2 \\ &\leq x^2\end{aligned}$$

A table of data

I stole these examples from

<http://en.wikibooks.org/wiki/LaTeX/Tables> which you are encouraged to visit

1	2	3
4	5	6
7	8	9

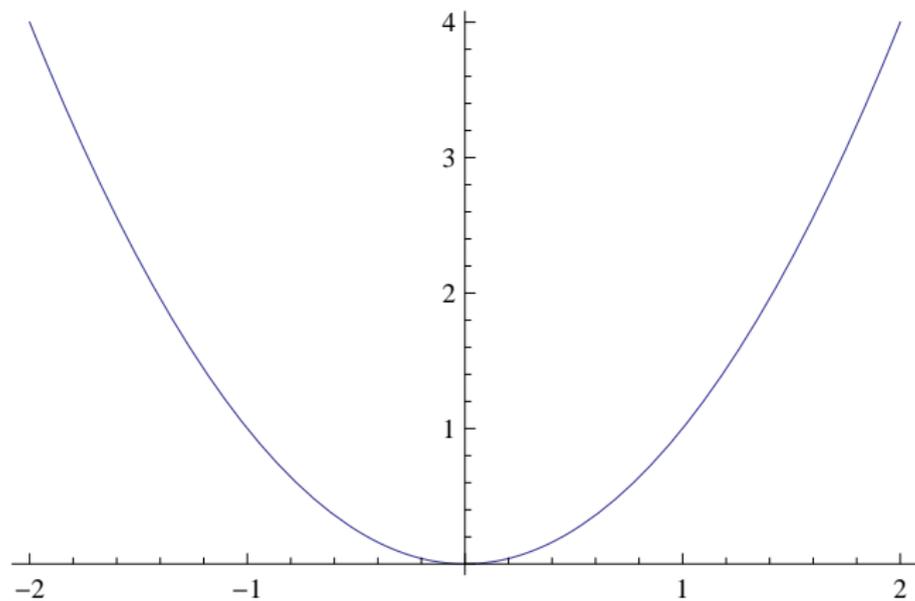

A more complicated table of data

This is some comment that applies to all the junk in all the columns. Therefore, it spans the entire slide.
